DETAILED ACTION

This application has been examined. The original claims 1-21 are pending. The examination results are as following.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tabata (US patent 5,579,026 cited by Applicant) in view of Green (US patent 5,124,659).

Tabata discloses in figure 1-2 that a method of displaying images using a wearable display device comprising a controller (11) operable coupled to the display, wherein the controller obtains image signal data from source image and generates a display (21L, 22L) signal for display by the display; and optics (left, right eyes of the user or optical system, see column 2, lines 11-16), the controller comprising a processor operable coupled the image source (figure 13, column 10, lines 9-24), the system having an adjusting in the image signal (see column 2, lines 43-49). However, Tabata does not disclose that the display comprising an inner region, an outer region, and outer region of less than 5 cycles per degree resolution, or the inner region of at least 15 cycle per degree resolution, and ratio between an inner region and an edge of the source image of between 2:1 and 20:1.

Green discloses in figure 1 that pixel of a display device comprising an inner and outer regions. It would have been obvious to one of ordinary skill in the art at the time the invention was made to implement the teachings of using the regions as taught by Green in the display system of Tabata because this would provide the range of the levels to be achieved by appropriate selection of areas.

From the claims 3-4, 9-10, 14, 17 and 21, it would have been obvious to one of ordinary skill in the art at the time the invention to have an outer region of less than 5 cycles per degree resolution, or the inner region of at least 15 cycle per degree resolution, and ratio between an inner region and an edge of the source image of between 2:1 and 20:1, as claimed since such a modification would have involved a mere change in range/shape of the levels. A change in range/shape is generally recognized as being within the level of ordinary skill in the art.
